

## LIQUID WASTE

**Solo provide the removal of Liquid Waste for:**

Restaurants, cafes, hotels and clubs  
Retail and take away food outlets  
Shopping centres  
Automotive and engineering workshops  
Hospitals, nursing homes  
Domestic septic tanks  
Portable toilets

**How does the service work?**

Step 1. The service involves the Solo vehicle attending your site at a time suitable to you. We do our best to avoid busy periods or times you would prefer not to have your service completed. For example, a restaurant grease trap will be emptied before opening hours.

Step 2. The driver will use the wide diameter hose to extract the contents of the septic, grease trap or holding tank, ensuring that no spillage occurs.

Step 3. Following the emptying of your tank or grease trap, it is washed down with fresh water to minimise permanent build up on the inside walls. Any filters are also rinsed to enable the trap to continue to work effectively.

Step 4. The liquid waste is transported to an EPA ( Environment Protection Agency ) approved facility. Here, the waste is filtered and settled to remove materials that cannot be treated in the Council waste water treatment plant. The removed materials are disposed in accordance with EPA regulations.

**How often should I get a service?**

Contact our Operations staff to organise a suitable collection timetable for your liquid waste collections. Septic tanks and grease traps have recommended collection timetables set by the local Council. We can advise you to ensure your service is Council approved.

Should you need an emergency service, being locally based, we will respond quickly.
